SUMMARY

Machine Learning enthusiast with hands-on experience in computer vision and deep learning using Python, TensorFlow, and OpenCV. Skilled in image processing, dataset preparation, and model training for real-time applications. Experienced in optimizing models, conducting experiments, and building scalable ML solutions.

SKILLS

- **Languages:** Python, Java
- **AI/ML:** Machine Learning, Deep Learning, Computer Vision, NLP
- **Libraries:** TensorFlow, OpenCV, Scikit-learn, NumPy, Pandas
- **Concepts:** Image Processing, Data Preprocessing, Model Training, Model Optimization
- **Other:** Data Analysis, Automation Scripts

EXPERIENCE

- **React Native Developer Intern — DiGrows** 2025
Certificate
 - Assisted in developing applications using React and Node.js with REST API integration
 - Worked on debugging issues and improving application performance
 - Collaborated with team members on feature development and testing
 - Gained hands-on experience in full-stack development and real-world projects

PROJECTS

- **AuthenTrack - AI-Based Attendance System** Dec 2024
GitHub | Live
 - Developed a computer vision-based attendance system using face recognition models
 - Processed and prepared image datasets with preprocessing and augmentation using OpenCV
 - Trained and optimized deep learning models using TensorFlow for real-time prediction
 - Conducted experiments on model performance and improved accuracy through data tuning
- **SheHelp - AI Healthcare Platform** 2025
GitHub | Live
 - Developed an AI-powered healthcare platform using Gemini API for intelligent chatbot responses
 - Built machine learning model using structured datasets with data preprocessing and feature engineering
 - Evaluated and optimized model performance through experimentation and accuracy improvement techniques
- **KrishiOne - Grocery App** Aug 2025
GitHub
 - Built a full-stack application using React, Node.js, and MongoDB
 - Implemented cart, checkout, and API-based data handling
 - Focused on building scalable, reusable UI components and improving frontend performance

ACHIEVEMENTS

- **2nd Position - Dotslash Hackathon** Nov 2024
Certificate
 - * Developed AI-based health monitoring system with NLP chatbot, improving process efficiency by 70%
- **Research Publication - Cybersecurity** May 2025
Certificate
 - * Published research on ML-based detection and prevention of social engineering attacks in IJPREMS journal
